

CS201 – Spring 2022-2023 - Sabancı University

Homework #5: Library System

Due May 15 -, Wednesday, 23:00 (Sharp Deadline)

Introduction

In this assignment, you will develop a library management program to handle a collection of books. The main functionalities include adding books to the library, searching for a book by author, searching for a book by title and displaying the books sorted by the author's last name. If multiple books have the same author, they will be sorted by their titles. You will implement the insertion sort algorithm to sort the books, the binary search algorithm to search for a book by the author, and the linear search algorithm to search by title. This project aims to provide practice working with structs and vectors. You can utilize the algorithms provided in your lectures to complete this task.

Your homework will be automatically graded using SUCourse, so it is very important to satisfy the exact same outputs given in the example test cases of SUCourse. Please submit your assignment by writing your main source (cpp) file content into the Answer field. You can utilize the **Check** button under the code editor at SUCourse to check whether your implementation is working in the expected way. After you check your solution code, you will see your grade with the example test cases used; however your homework will then be graded with different test cases.

To submit your homework, you must hit the **“Finish attempt...”** and **“Submit all and finish”** buttons. Just a reminder of a character  which refers to a newline in your expected output.

VERY IMPORTANT!

Your programs will be compiled, executed and evaluated automatically; therefore, you should definitely follow the rules for prompts, inputs and outputs. See Sample Runs section for some examples.

- Order of inputs and outputs must be in the abovementioned format.
- Prompts before inputs and outputs must be exactly the same with examples.

Following these rules is crucial for grading, otherwise our software will not be able to process your outputs and you will lose some grades in the best scenario.

Inputs

There are various inputs in this program, including book details, menu choices, and search queries. The primary inputs are the book's title, author, and publication year. You can assume that the book's title and author will be strings containing letters, digits, and spaces. The publication year will be an integer input. The user can add books one at a time using the "Add books" menu option.

Another input is the menu choice, which is an integer ranging from 1 to 5, representing the available menu options. The user can enter menu choices until they enter "5" to quit the program.

The search query is a string input representing the title of the book the user wants to search for.

Input Checks

The rules for input checks are as follows:

For book details and search query, you can assume that the user enters these inputs correctly, and you do not have to check them.

Book details:

Title: Must be a string containing only letters, digits, and spaces.

Author: Must be a string containing only letters, digits, and spaces.

Publication Year: Must be a valid integer.

Search query:

Must be a string containing only letters, digits, and spaces. Cannot be empty.

You can assume that the menu choice is an integer, but you should check it for the range.

Menu choice: Must be an integer ranging from 1 to 5.

In case of an invalid input, the program should ask for input again until a correct input is entered. Use loops and conditional statements to ensure input validity.

Processing, Program Flow, and Output

Your program should start with an introductory explanation and a prompt for the input. After initializing the library system with a predefined set of books, the program will display a menu with four options:

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

The user can enter their choice as an integer.

And here is the predefined set of books that you should implement into your code:

```
vector<Book> books = {  
    {"The Great Gatsby", "F Scott Fitzgerald", 1925},  
    {"Moby Dick", "Herman Melville", 1851},  
    {"To Kill a Mockingbird", "Harper Lee", 1960},  
    {"Pride and Prejudice", "Jane Austen", 1813},  
    {"Burmese Days", "George Orwell", 1934},  
    {"Brave New World", "Aldous Huxley", 1932},  
    {"Animal Farm", "George Orwell", 1945}  
};
```

If the user chooses to add a book, the program should prompt for the book's title, author, and publication year. After the user enters the details, the program should add the book to the library and re-sort the library.

If the user chooses to search for a book by an author, the program should prompt for the author's full name. The search should be based on the author's last name and be case-insensitive. If any books are found by the specified author, the program should display the details of each book, including its title, author, publication year and position. If no books are found by the specified author, the program should display an appropriate message.

If the user chooses to search for a book by title, the program should prompt for the book's title. The search should be case-insensitive and based on the provided title. If any books with the specified title are found, the program should display the details of each book, including its title,

author, publication year, and position in the sorted list. If no books are found with the specified title, the program should display an appropriate message.

If the user chooses to display books, the program should display the entire library sorted by the author's last name as case-insensitive. The output should include the book's title, author, and publication year.

If the user chooses to quit, the program should display a farewell message and terminate.

Your program should continuously display the menu and prompt for input until the user chooses to quit.

In this homework assignment, it is required to store the book data in a structured way, using a struct and a vector. This will help keep the data organized and make it easier to perform various operations on the data, such as sorting, searching, and displaying.

A struct is a composite data type that groups together variables under a single name, making it easier to manage related data. In this case, a struct called Book has been defined with three members: title, author, and publication year. Each member holds a piece of information about a book.

A vector is a dynamic array that can grow or shrink in size as elements are added or removed. In this assignment, a vector of Book structs is used to store the book data. This allows for easy management of the book collection and enables the use of various vector operations, such as adding a new book or searching for an existing one.

IMPORTANT!

If your code does not compile, you will get **zero**. Please be careful about this and double check your code before submission.

No abrupt program termination please!

You may want to stop the execution of the program at a specific place (before the end) in the program. Although there are ways of doing this in C++, it is not a good programming practice to abruptly stop the execution in the middle of the program. Therefore, your program flow should continue until the end of the main function and finish there.

Sample Runs

Below, we provide some sample runs of the program that you will develop. The *italic* and **bold** phrases are inputs taken from the user. You have to display the required information in the same order and with the same words and characters as below.

Sample Run 1

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **4**

Sorted books by author's last name:

1. Pride and Prejudice, Jane Austen, 1813
2. The Great Gatsby, F Scott Fitzgerald, 1925
3. Brave New World, Aldous Huxley, 1932
4. To Kill a Mockingbird, Harper Lee, 1960
5. Moby Dick, Herman Melville, 1851
6. Animal Farm, George Orwell, 1945
7. Burmese Days, George Orwell, 1934

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **5**

Goodbye!

Sample Run 2

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **1**

Enter the new book details:

Enter book's title: ***The Hunger Games***

Enter book's author: ***suzanne collins***

Enter book's publication year: ***2008***

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **4**

Sorted books by author's last name:

1. Pride and Prejudice, Jane Austen, 1813
2. The Hunger Games, suzanne collins, 2008
3. The Great Gatsby, F Scott Fitzgerald, 1925
4. Brave New World, Aldous Huxley, 1932
5. To Kill a Mockingbird, Harper Lee, 1960
6. Moby Dick, Herman Melville, 1851
7. Animal Farm, George Orwell, 1945
8. Burmese Days, George Orwell, 1934

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **1**

Enter the new book details:

Enter book's title: ***The Moonstone***

Enter book's author: ***Wilkie Collins***

Enter book's publication year: **1868**

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **4**

Sorted books by author's last name:

1. Pride and Prejudice, Jane Austen, 1813
2. The Hunger Games, suzanne collins, 2008
3. The Moonstone, Wilkie Collins, 1868
4. The Great Gatsby, F Scott Fitzgerald, 1925
5. Brave New World, Aldous Huxley, 1932
6. To Kill a Mockingbird, Harper Lee, 1960
7. Moby Dick, Herman Melville, 1851
8. Animal Farm, George Orwell, 1945

9. Burmese Days, George Orwell, 1934

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **5**

Goodbye!

Sample Run 3

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **2**

Enter the author of the book you want to search for: **George Orwell**

Books by Orwell:

Title: Animal Farm, Publication Year: 1945, Position: 6

Title: Burmese Days, Publication Year: 1934, Position: 7

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **2**

Enter the author of the book you want to search for: **Murat Mentos**

No books were found.

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **5**

Goodbye!

Sample Run 4

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **6**

Invalid choice, please try again.

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **5**

Goodbye!

Sample Run 5

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **3**

Enter the title of the book you want to search for: ***animal farm***

Books matching the title "animal farm":

Title: Animal Farm, Author: George Orwell, Publication Year: 1945, Position: 6

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **1**

Enter the new book details:

Enter book's title: ***Harry Potter and the Prisoner of Azkaban***

Enter book's author: ***j k rowling***

Enter book's publication year: ***1999***

Library System Menu:

1. Add books

2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **3**

Enter the title of the book you want to search for: ***Harry Potter and the Prisoner of Azkaban***

Books matching the title "Harry Potter and the Prisoner of Azkaban":

Title: Harry Potter and the Prisoner of Azkaban, Author: j k rowling,
Publication Year: 1999, Position: 8

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **4**

Sorted books by author's last name:

1. Pride and Prejudice, Jane Austen, 1813
2. The Great Gatsby, F Scott Fitzgerald, 1925
3. Brave New World, Aldous Huxley, 1932
4. To Kill a Mockingbird, Harper Lee, 1960
5. Moby Dick, Herman Melville, 1851
6. Animal Farm, George Orwell, 1945
7. Burmese Days, George Orwell, 1934
8. Harry Potter and the Prisoner of Azkaban, j k rowling, 1999

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **3**

Enter the title of the book you want to search for: ***Dublorun Dilemmasi***

Books matching the title "Dublorun Dilemmasi":

No books were found.

Library System Menu:

1. Add books
2. Search for an author
3. Search for by book title
4. Display books
5. Quit

Enter your choice: **5**

Goodbye!

General Rules and Guidelines about Homework

The following rules and guidelines will be applicable to all homework unless otherwise noted.

How to get help?

You may ask questions to TAs (Teaching Assistants) or LAs (Learning Assistants) of CS201. Office hours of TAs/LAs are at the SUCourse.

What and Where to Submit

You can prepare (or at least test) your program using MS Visual Studio 2019 C++ (Windows users) or using XCode (macOS users).

- Your code will be automatically graded using SUCourse. Therefore, it is essential that you ensure your output matches the exact same outputs given in the example test cases provided by SUCourse.
- After writing your code, use the "Check" button located under the code editor in SUCourse to see your grade based on the example test cases used. This grade will give you an idea of how well your code is performing.
- Note that the example test cases used for checking your code are not the same as the ones used for grading your homework. Your final grade will be based on different test cases. Therefore, it is important that you carefully follow the instructions and ensure that your code is working correctly to achieve the best possible grade on your homework assignment.
- To submit your homework, click on the "Finish attempt..." button and then the "Submit all and finish" button. If you wish to submit again before the due date, you can press the "Re-attempt quiz" button.
- Submit your work **through SUCourse only!** You will receive no credits if you submit by any other means (email, paper, etc.).

Grading, Review and Objections

Be careful about the automatic grading: Your programs will be graded using an automated system. Therefore, you should follow the guidelines on the input and output order. Moreover, It is important to use the exact same text as provided in the example test case outputs from SUCourse. Otherwise, the automated grading process will fail for your homework, and you may get a zero, or in the best scenario, you will lose points.

Grading:

- There is NO late submission. You need to submit your homework before the deadline. Please be careful that SUCourse time and your computer time may have 1-2 minute differences. You need to take this time difference into consideration.
- Successful submission is one of the requirements of the homework. If, for some reason, you cannot successfully submit your homework and we cannot grade it, your grade will be 0.
- If your code does not work because of a syntax error, then we cannot grade it; and thus, your grade will be 0.
- Please submit your **own** work **only**. It is really easy to find "similar" programs!
- Plagiarism will not be tolerated. Please check our plagiarism policy given in the [Syllabus](#).

Plagiarism will not be tolerated!

Grade announcements: Grades will be posted in SUCourse, and you will get an Announcement at the same time. You will find the grading policy and test cases in that announcement.

Grade objections: It is your right to object to your grade if you think there is a problem, but before making an objection please try the steps below and if you still think there is a problem, contact the TA that graded your homework from the email address provided in the comment section of your announced homework grade or attend the specified objection hour in your grade announcement.

- Check the comment section in the homework tab to see the problem with your homework.
- Check the test cases in the announcement and try them with your code.
- Compare your results with the given results in the announcement.

Good Luck!

Emine Beyza Çandır & Gülşen Demiröz & Erchan Aptoula
